IS WHAT NORTENT IS ALL
ABOUT.** ☐☐

GAMME 6 PC

Gamme 6 PC has a very strong construction that can withstand severe weather conditions and heavy snow-load. A "cabin" to carry in the bag. Our inspiration for this tent comes from an ancient Norwegian form of a hut. The Gamme has been used since the first people came to Norway thousands of years ago, providing a safe and secure shelter. It is still used today by indigenous Sami people of Norway.

Gamme 6 PC is designed around a stove. We believe having a warm and pleasant environment inside the tent enhances the complete outdoor experience.

WEATHERING

Most tent fabrics need some kind of waterproof coating to make it waterproof. But with polycotton much of the "waterproofing" work is done by the fiber itself. A cotton canvas is not completely waterproof from the factory. It needs to be exposed to water so that the fibers in the fabric expand and thus make the fabric 100% waterproof. Be it from exposure to rain or water from a garden hose, this process is called weathering. This also applies to the thread in the seams.

WATERPROOFNESS

A blue tent is pitched on a grassy hillside. The background features a dense forest of evergreen and deciduous trees, with a rocky mountain peak visible in the distance under a clear blue sky.

With this in mind it may be good to know that it is normal with a few drops of water coming through the fabric during the first rain showers. The fabric will become denser after each time and eventually become completely waterproof. It is the internal fibers in the tent fabric that are making the fabric completely waterproof. With proper care and storage the tent will maintain its waterproof properties for many years to come with no extra maintenance to waterproofing.

TAKING CARE OF YOUR TENT

A black tent is pitched in a snowy landscape at sunset. The tent is the central focus, with its dark fabric contrasting against the bright orange and yellow sky. The ground is covered in snow, and a tripod is visible in the foreground. The background shows a range of mountains under a clear sky.

It's important to make sure your tent is completely dry before storing it. Moisture can cause mold and mildew to grow, which can weaken the fabric and cause unpleasant odors. Set it up in a well-ventilated area to dry before storing it in its carrying bag.

Always store your tent in a cool, dry place, away from direct sunlight or heat sources. Avoid storing it in a damp or humid area.

All our tents are treated with UV protection to help protect the fabric from UV rays. But it is still important to keep the tent out of direct sunlight as much as possible. Use a shaded area, or use a tarp or other shading device to protect it from the sun.

PITCHING YOUR GAMME 6 PG

A yellow tent is pitched in a dark, mountainous landscape at night. The tent is illuminated from within, casting a warm glow. The background shows dark, jagged mountain peaks under a dark sky. The overall scene is a nighttime camping setup in a rugged environment.

Our tent poles are of high quality and are very flexible and strong. They are tested in the real world under high stress for optimal and correct understanding of its durability. But nevertheless they are lightweight aluminum and could break if not handled correctly. For best use, strength and durability of your pole, ensure that each section is properly inserted into place, and ensure that pole sections do not pull apart during pitching, as the resulting gaps can lead to breakage.

Gamme has five poles. Three black, and two colored.

Start with one of the black poles

Insert it into the longest sleeve

Attach it to the corresponding black cups

Identify the strap in the middle of one of the entrances. Stake it!

Identify the strap on the opposite side of the tent. Stretch the tent to an upward position.

Stake the strap temporary.

Prepare one of the two colored poles.

Insert it into one of the colored cups

Find the second corresponding colored cup. Insert the pole.

Insert the second colored pole into the two remaining colored cups.

Attach the clips to the two poles.

Now. Lower the tent.

It will help you to insert the two remaining black poles.

Prepare the two remaining black poles.

Insert them into the two short sleeves.

Glide these under the two existing poles.

Then. Raise the tent by reinserting the black pole from the long sleeves into the corresponding cup.

Important note about pole usage.

Our tent poles are of high quality and are very flexible and strong. They are tested in the real world under high stress for optimal and correct understanding of its durability. But nevertheless they are lightweight aluminum and could break if not handled correctly. For best use, strength and durability of your pole, ensure that each section is properly inserted into place, and ensure that pole sections do not pull apart during pitching, as the resulting gaps can lead to breakage.

A glowing orange tent is pitched in a snowy forest at night. The tent is illuminated from within, casting a warm orange glow. The surrounding environment is dark, with snow-covered ground and silhouettes of trees against a deep blue night sky. The tent is the central focus, with its entrance open, revealing the interior. The overall mood is cozy and serene.
